How to scan a 3D image

1. Make sure the scanner is on by holding the power button until it turns blue.

2. Place your item on the scanner.

3. Open the EXScan icon on the desktop. **(Fig. 1)**

4. Choose the Einscan SP icon. **(Fig. 2)**

5. Open up a New or Existing Work. **(Fig. 3)**

6. You can choose a Texture Scan or a Non Texture Scan. The 3D printer will not recognize texture, but either choice will scan well. **(Fig. 4)**

7. At this point, we strongly recommend watching the short Youtube Video Tutorial we have linked on the desktop. This is an excellent tutorial that explains how to use this scanner in a very accessible way. **(Fig. 5)**
